Commonly Used EPA Registered Canine Topical Flea and Tick Control Products

External parasites pose a threat to your patients year round, so clients deserve your very best advice when developing a strategy for controlling infestations. This chart represents the most commonly used EPA-regulated canine topical flea & tick control products as of April 1, 2016. All products are applied monthly unless otherwise indicated. Please refer to individual product labels and package information for more details on target parasites, contraindications, and safety information. Products listed here are not for use on cats.

*Refer to product label for specific tick, mosquito, fly, and mite species affected.
† Indicates that the product repels the selected parasite.
